

Preface

The first workshop of particle physics and phenomenological aspects of QCD was devoted to the current topics in QCD including structure of Hadrons, Jet events, lattice gauge field theory and some other interesting subjects.

In setting of the program we enjoyed and hereby acknowledge all participants for their attendance in this workshop. We hope this workshop was useful to all and could give the necessary back ground and insights and made them familiar with current tasks which are doing in QCD.

Our special gratitude goes to Farhad Ardalan who provided us the main motivation to organize this workshop and also Shahrokh Parvisi who was following time by time the affairs of workshop and gave us necessary comments. We would also like to thank Hessamaddin Arfaei and Mohsen Alishahiha to present impressive talks in the workshop.

With out any doubt the collaboration of Mrs. Davarpanah and other staffs in physics department of IPM have been very effective in performing this workshop.
