

Contents

1	Congruence and Arithmetic Subgroups	1
1.1	Definitions	1
1.1.1	Congruence Subgroups	2
1.2	Fundamental Domains	10
1.3	Arithmetic Subgroups	16
1.3.1	Basic Definitions	16
1.3.2	Arithmetic Subgroups	18
1.3.3	Rational Structures	20
1.4	Siegel Sets	21
1.4.1	Siegel Sets in $GL(r, \mathbb{R})$	25
1.5	Fundamental Sets	30
1.5.1	Siegel Property	33
1.6	A Review of Algebraic Groups	41
1.6.1	Twisted Algebraic Groups	43
1.7	Finiteness and Compactness Criteria	45
1.8	Fundamental Domains for $GL(r, \mathbb{R})$ and $Sp(2r, \mathbb{R})$	48
1.8.1	Fundamental Domain for $GL(r, \mathbb{R})$	48
1.8.2	Symplectic Group and Its Fundamental Domain	50
1.8.3	Symmetric Spaces	54
1.8.4	Tube Domains	56
1.9	Special Subgroups	60
1.9.1	Parabolic Subgroups in $GL(r)$	61
1.9.2	The Unipotent Radical	63

1.9.3	Levi Component	64
1.9.4	The Split Component	64
1.9.5	Maximal Compact Subgroups	65
1.9.6	Split Torus	65
1.9.7	Parabolic Decomposition	65
2	Classical Theory of Holomorphic Modular Forms of One Variable	67
2.1	Space of Modular Forms of Even Weights	67
2.2	Compactification of $\Gamma \backslash \mathbb{H}$	72
2.2.1	The Fixed Points	74
2.2.2	The Topology on \mathbb{H}^*	76
2.2.3	Topology on $\Gamma \backslash \mathbb{H}$ and $\Gamma \backslash \mathbb{H}^*$	77
2.3	Dimension and a Basis of Space of Modular Forms of Even Weights	79
2.3.1	A Basis for M_{2k}	84
2.4	The Algebra M and the Field of Modular Functions	85
2.5	Fourier Coefficients, and Space of Cusp Forms . . .	88
2.5.1	Fourier Coefficients of Eisenstein Series .	92
2.6	Fourier Coefficients of Ramanujan Δ -function	93
2.7	Hilbert Space Theory on Space of Cusp Forms . . .	97
2.7.1	S_{2k} as a Finite Dimensional Hilbert Space	97
2.7.2	The Kernel Function and an Integral Representation of the Dimension Formula	101
3	The Classical Hecke Theory	107
3.1	Hecke's Definition of Hecke Operators	107
3.1.1	Fourier Coefficients of Hecke Operators .	113
3.1.2	Multiplicative Properties of $T(n)$	115
3.1.3	Eigenvalues of Hecke Operators	119
3.2	Zeta Functions for Classical Modular Forms	124

3.3	Modular Forms with Characters and the Theorem of Weil	130
3.3.1	Characters and Gauss Sums	132
3.3.2	The Spaces $M_k(\Gamma, \chi)$ and $S_k(\Gamma, \chi)$	135
3.4	More on Hecke Rings and Hecke Operators	143
4	An Introduction to Selberg's Trace Formula	151
4.1	Invariant Integrations	151
4.1.1	Haar Measure and Invariant Integrations	153
4.1.2	The Volume of a Siegel Set	166
4.2	Adeles	170
4.2.1	The Direct Product Topology	170
4.2.2	The Ring of Adeles	172
4.3	Functional Analysis on Hilbert Spaces	174
4.3.1	Eigenvalues and Spectrum	179
4.3.2	Trace Class Operators	180
4.4	The Spectral Side of Selberg's Trace Formula	183
4.4.1	The Unitary Dual	184
4.4.2	The Right Translation	186
4.4.3	Selberg's Trace Formula	190
4.4.4	The Spectral Decomposition	195
4.5	The Geometric Side of Selberg's Trace Formula	196
4.5.1	The Kernel	197
4.5.2	The Geometric Side and Orbital Integrals	199
4.5.3	Some Examples	200
4.6	The Difficulties in the Non-compact Case	202
4.7	Some Generalizations	206
4.8	Some General Remarks on Twisted Trace Formula	208
4.8.1	Twisted Hecke Operators and Twisted Regular Representations	208
